Trust Score Guide

How hired employees confirm whether employers kept their accommodation promises

The whole process for job seekers and employers, screen by screen: from the promise on the job posting, through the confirmed hire and the 30-day wait, to the anonymous rating and the published score.

Covers	Job seekers (candidates), employers, administrators
Screens	Captured October 23, 2026 on a local, freshly seeded stack (test database, demo accounts)
Version	October 23, 2026 · commit `27d2d1c`

OpenDoor – PWD job matching by workplace accommodations · SIA 1 and IPT final project · Group 3 – ICARUS, IT31S1

8 For developers: endpoints and rules

The story in this guide

All screens come from one run through the real system. Two stories are used, so that every stage can be shown without changing any dates:

- **Story A – a new hire (steps 3.1–3.9 and 4.1–4.3).** Maria Santos (`candidate@`) applies for *Junior Web Developer* at Bayanihan Tech Solutions (`employer@`). The employer reports the hire with a start date of **October 30, 2026**; Maria confirms it. Her rating opens on **November 29, 2026** – until then it is locked.
- **Story B – 30 days later (steps 3.10–3.13, 4.4–4.5 and 5.1).** Juan Dela Cruz (`candidate2@`) was hired as *Quality Control Assistant* at Kalinga Foods Inc. (`employer2@`), starting **September 8, 2026**. His rating opened on **October 8, 2026**. Kalinga Foods Inc. had 2 responses, so its score was hidden; Juan's rating is the 3rd and publishes it.

1 The trust score at a glance

An employer's trust score answers one question for job seekers: **when this employer promised a workplace accommodation, was it really provided?** Only people the employer actually hired can answer, and only after they have worked there for 30 days.

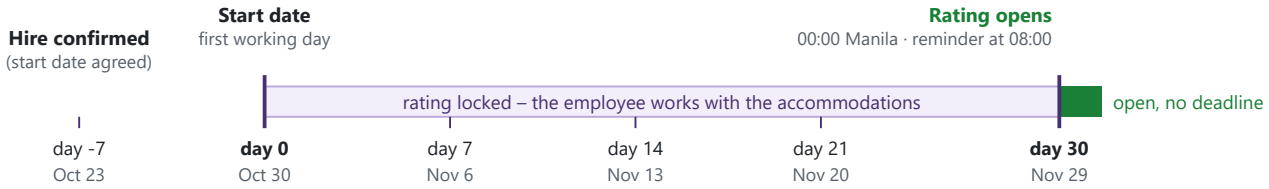

Who can rate	Only a **confirmed hire**: the application must be *Hired*, which needs both the employer and the job seeker to confirm it (steps 3.6–3.8). Nobody else – not other job seekers, not the employer, not admins.
When	From **calendar day 30 after the confirmed start date** (Philippine time). No deadline after that. One rating per hire.
What is rated	Each accommodation the job posting listed **when the hire was confirmed** (saved at that moment, so later edits to the posting do not change the form). Every item needs an answer.
Answers	**Delivered** = 1 point · **Partly delivered** = ½ point · **Not delivered** = 0 points. An optional comment (no names).
Score	Points ÷ number of rated items × 100, rounded to a whole percent, over all of the employer's responses (section 6).
Shown from	**3 responses**. Below that the score and the per-accommodation table are hidden for everyone, including the employer ("Not published yet … 2 of 3 so far").
Privacy	Answers are **anonymous**. The employer sees only the combined score and counts per accommodation – never who answered or what one person said.
Moderation	Admins can hide abusive, off-topic or clearly false responses; the score is recalculated at once.

2 How the 30 days work

The 30 days give the new employee time to actually work with the accommodations before judging them. The clock starts on the **start date both sides confirmed** – not on the day of the application, and not on the day the hire was confirmed.

The walkthrough's dates

Opens on = start date + 30 calendar days (weekends and holidays count).
Before that, the form answers "Not open yet" and the API refuses a rating with 422 FEEDBACK_NOT_OPEN.

Hire	Confirmed	Start date (day 0)	Rating opens (day 30)	Status on October 23, 2026
Story A: Maria · Junior Web Developer	October 23, 2026	October 30, 2026	November 29, 2026	Locked – "Not open yet" (step 3.9)
Story B: Juan · Quality Control Assistant	on the start date (demo data)	September 8, 2026	October 8, 2026	Open – reminder sent, rated (steps 3.10–3.12)
Rule example	–	October 1	October 31	–

Step by step

- **Start date.** Whoever reports the hire enters the first working day. It may be any day from the application date up to 365 days ahead – so it can be in the future (Story A) or already past.
- **Confirmation.** The other side answers *Confirm*. Only then does the application become *Hired* and the clock count from the start date. The promised accommodations are saved at this moment.
- **Days 0–29.** The job seeker's application shows "You can rate the accommodations from *date*". Opening the form shows "Not open yet"; the server refuses a rating with `422 FEEDBACK_NOT_OPEN`.
- **Day 30, 00:00 Philippine time.** The form opens. Calendar days count – weekends and holidays included.
- **Day 30, 08:00.** A daily job (`feedback:remind`) sends the job seeker one in-app notice – and an email if email notifications are on – saying the rating is open. Each hire is reminded once; a missed day is caught up the next morning.
- **After day 30.** The form stays open with no deadline until the job seeker rates. Once rated, the form says "Already rated".

What changes the date

"Not yet" with a new start date	The report stays open with the new date. When it is confirmed, day 0 is the new date.
"Incorrect"	No hire, no clock. The application stays at its stage; either side can report again.
Withdrawn / not selected while a report is open	The open report is cancelled. No hire, no rating.
Job closed after the hire	Nothing changes: the hire stays confirmed and the rating opens on day 30.

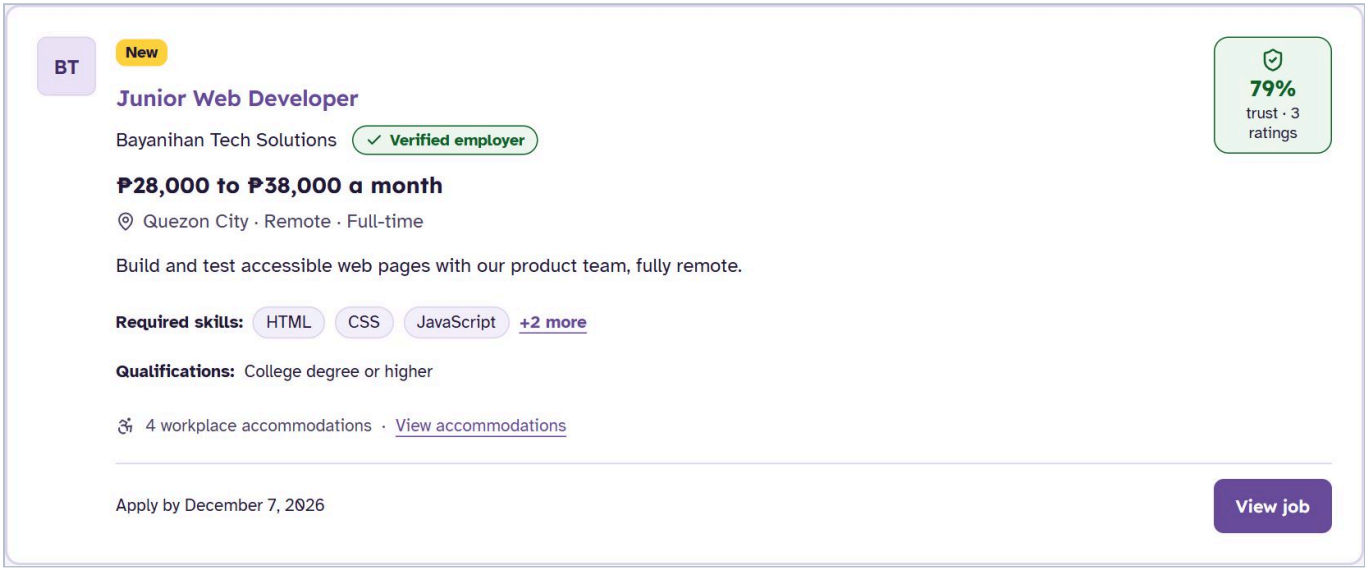

3 Job seeker: from applying to rating

Story A shows the job seeker's side up to the locked rating; Story B continues on day 30 with the reminder and the rating itself.

3.1 See an employer's trust score before applying

Guest or job seeker

Every job card shows the employer's score in its corner: the percentage and the number of ratings, or "Not rated yet" while fewer than 3 hired employees have answered.

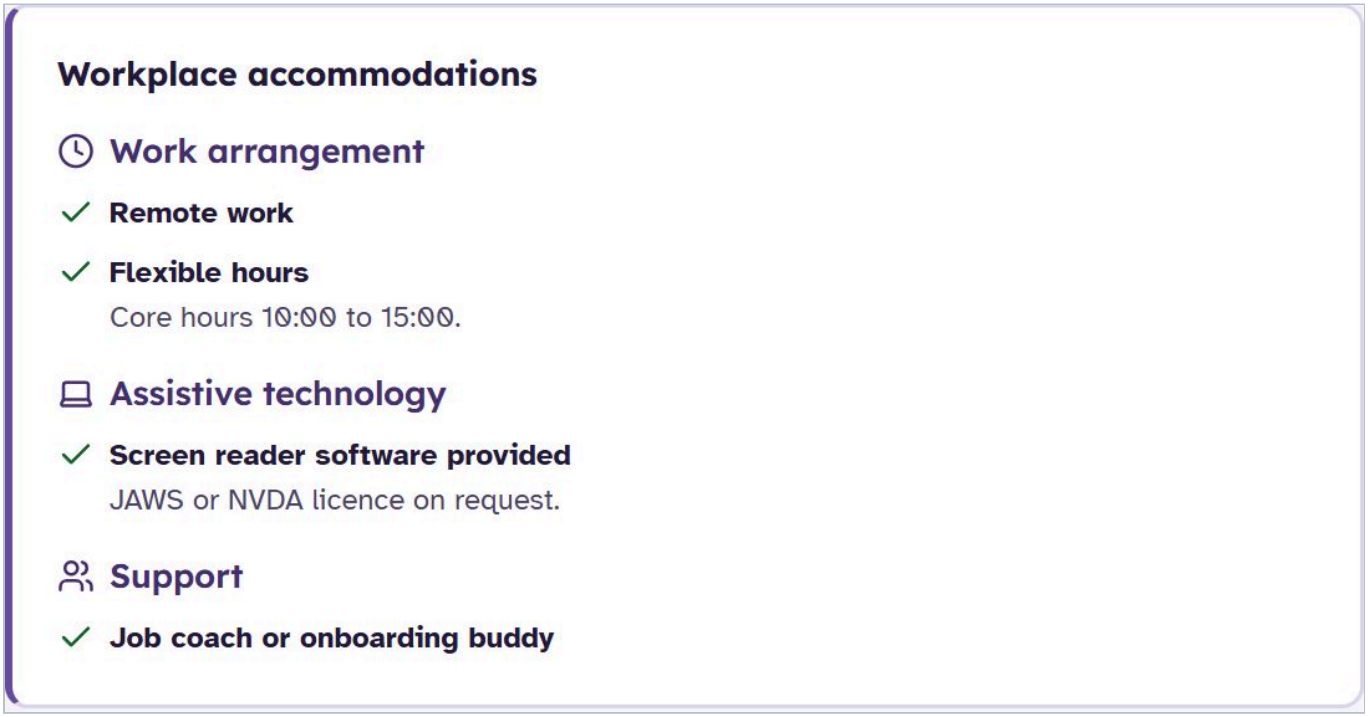

Find jobs: the card shows Bayanihan Tech Solutions' published score (79 %, 3 ratings).

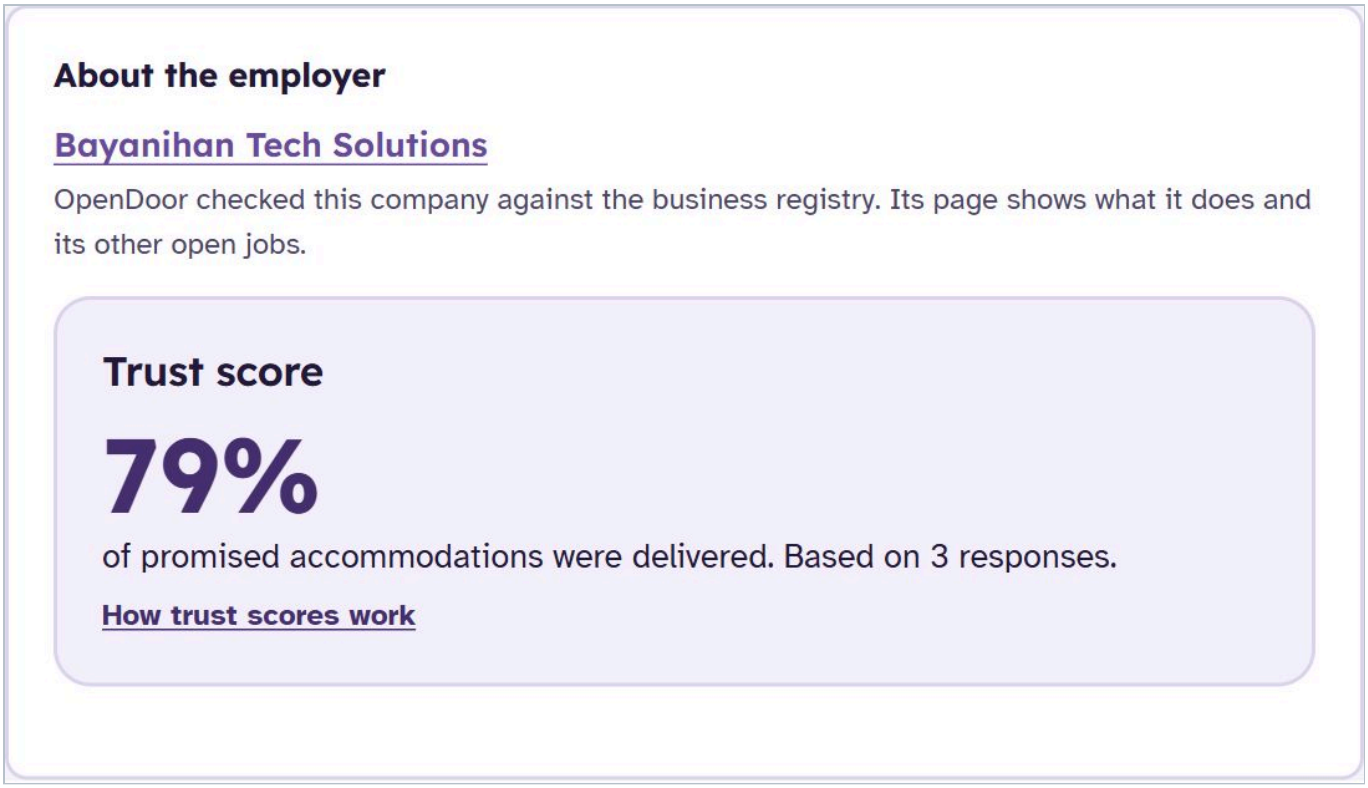

3.2 Read the promises and the score on the job page

Guest or job seeker

The job page lists the accommodations this employer promises for the job – exactly what a hired employee will rate later. "About the employer" repeats the score and links to the explanation.

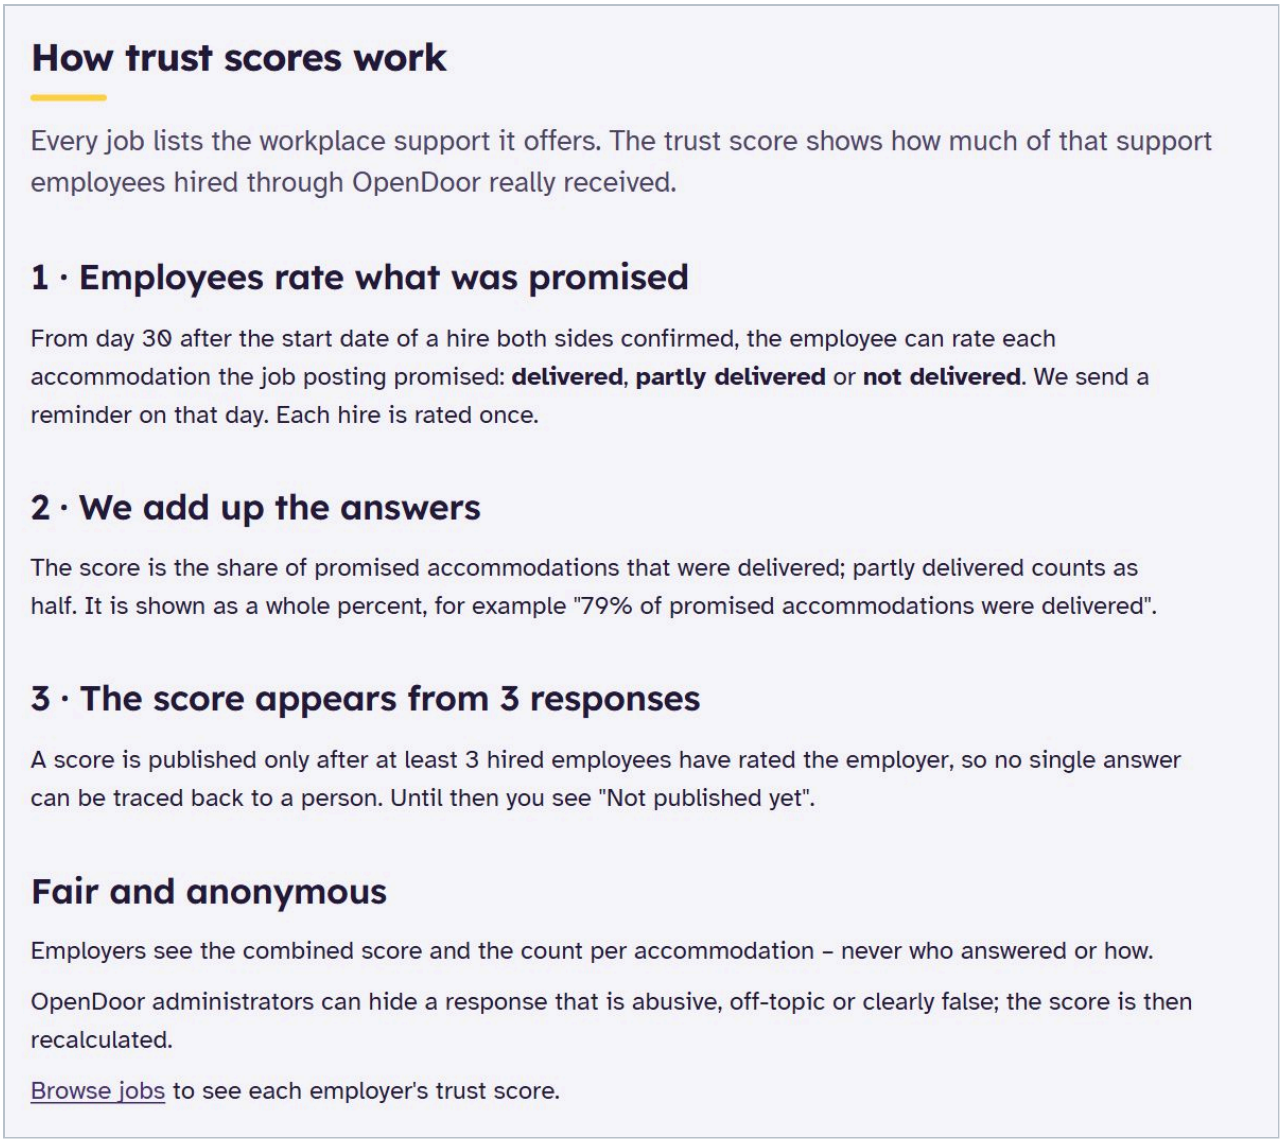

Job details → Workplace accommodations: the promises.

Job details → About the employer: verification and trust score.

3.3 How trust scores work (public page) — Anyone

The footer and the score cards link to a plain-language page explaining the rules in this guide.

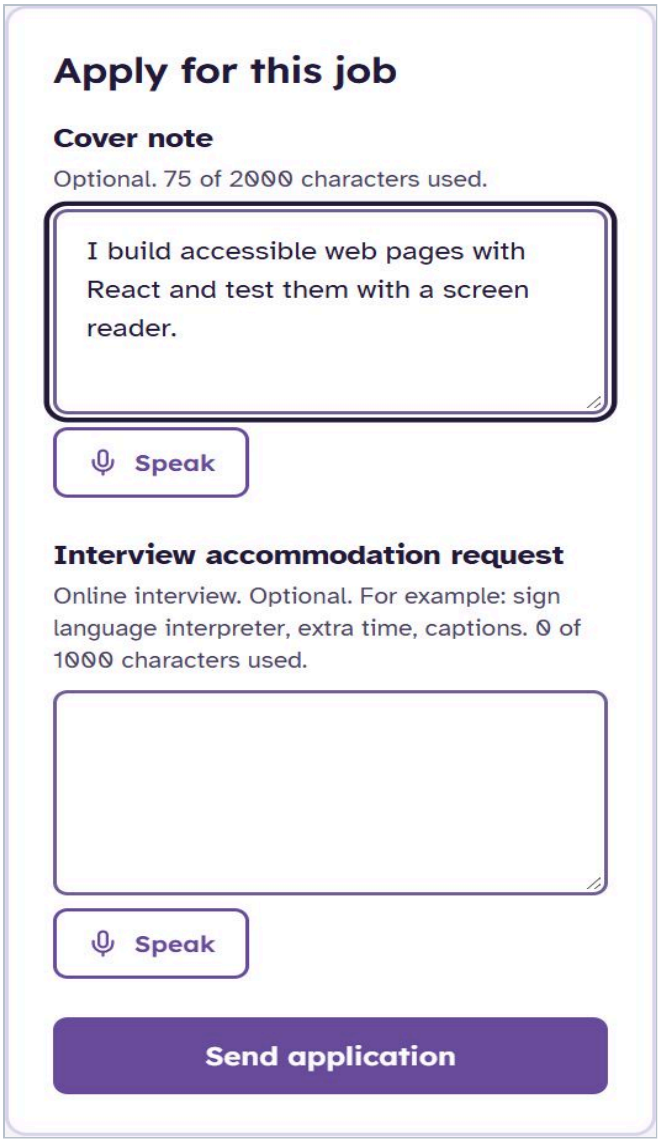

The public “How trust scores work” page (/trust-scores).

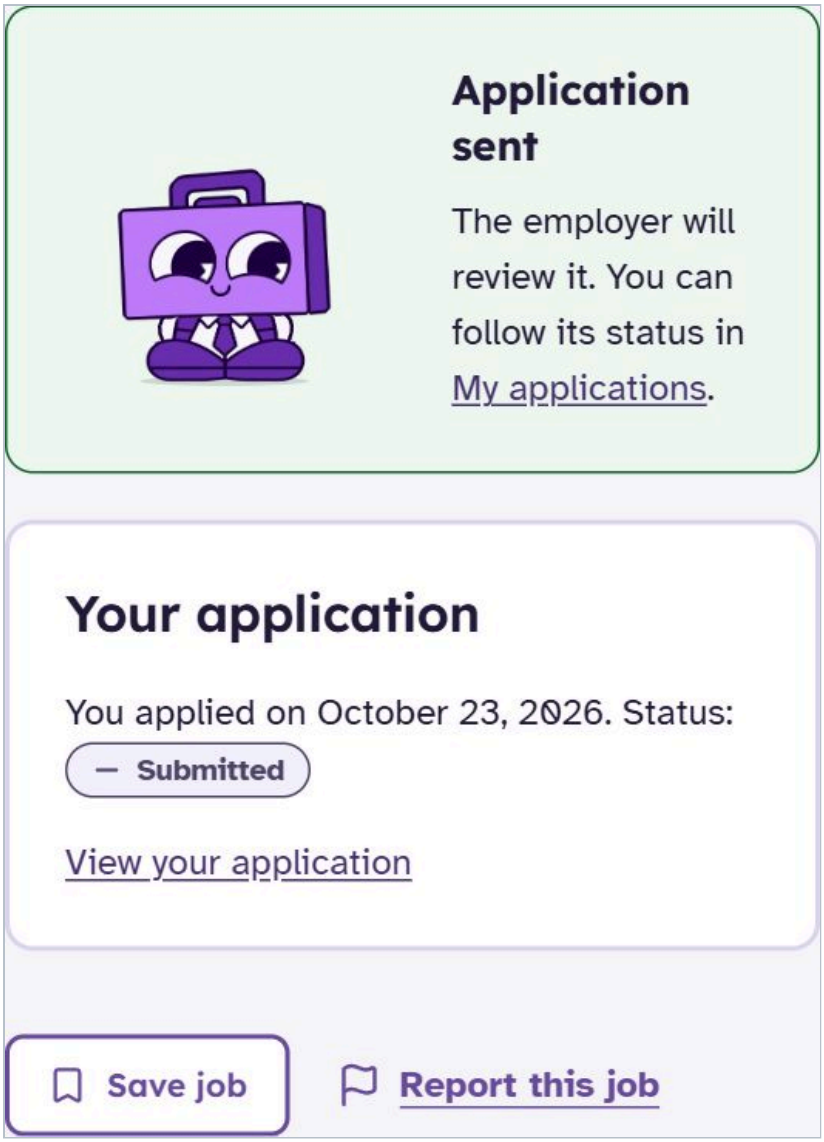

3.4 Apply

Job seeker

Maria applies with her saved résumé and a cover note. An application alone does not count for the trust score – only a confirmed hire does.

Apply for this job.

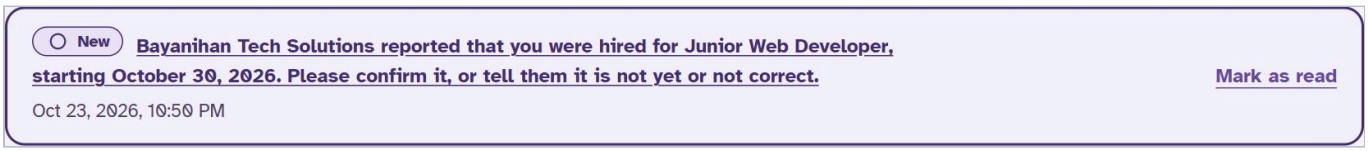

Application sent.

3.5 Get the employer's hiring report

Job seeker

After the employer reports the hire (step 4.2), Maria gets a notice. The link opens her application.

Notifications: the employer reported the hire.

3.6 Check the report: Confirm, Not yet or Incorrect

Job seeker

The employer says Maria was hired, starting October 30, 2026. She can **Confirm** it, answer **Not yet** (optionally with a new start date) or say it is **Incorrect**. Nothing is ever confirmed automatically.

Behind the screen: every report and answer is kept as history; only one report can be open per application.

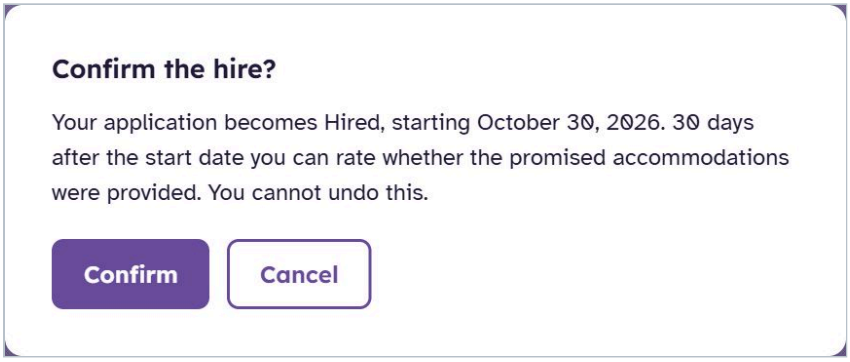

Hiring confirmation as the job seeker sees it, with the history.

3.7 Confirm the hire

Job seeker

The confirmation dialog says what happens next – including the 30-day rule – and that it cannot be undone.

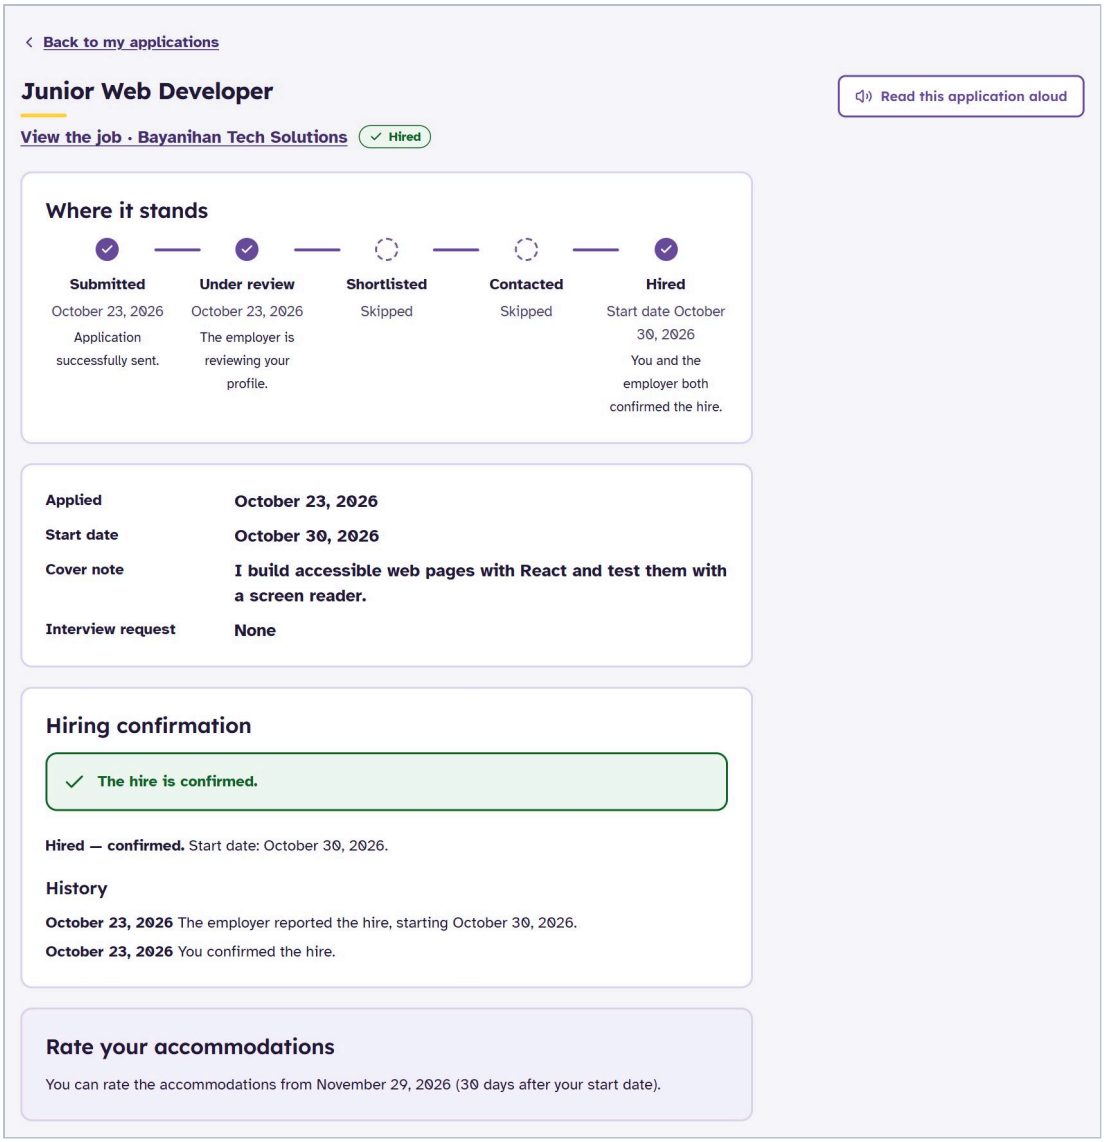

Confirm the hire?

3.8 Hired – the 30-day clock starts

Job seeker

The application is now **Hired**, start date October 30, 2026. The page tells Maria when she can rate: **November 29, 2026**.

Behind the screen: the application gets `hired_at` (the moment of confirmation), `hire_start_date` 2026-10-30, and the posting's accommodations are saved for the form. `feedback_opens_on` = 2026-11-29.

The application after confirming: Hired, start date, timeline and history.

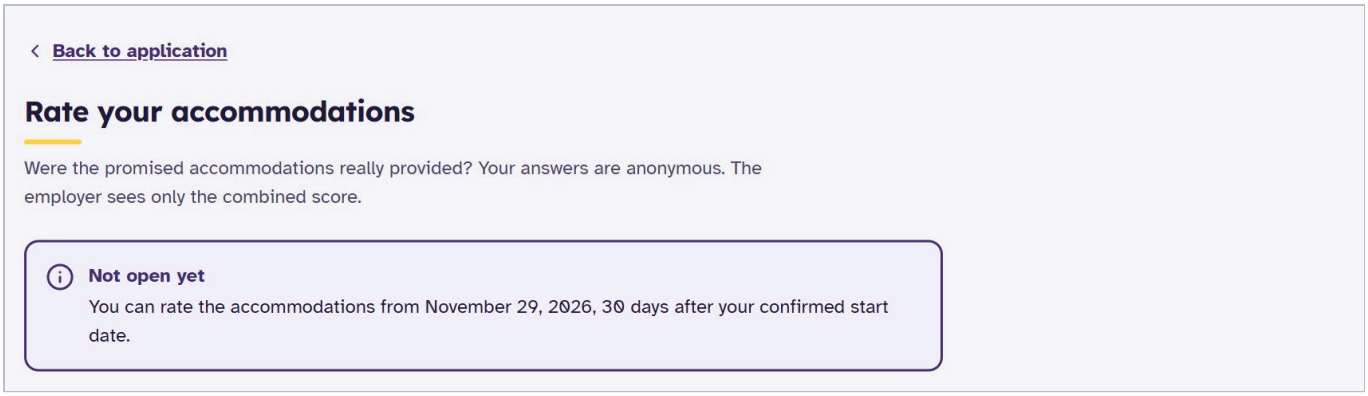

The rating card: opens 30 days after the start date.

3.9 Before day 30: the form is locked

Job seeker

Opening the rating form early only shows when it opens. The server refuses an early rating as well, so the rule cannot be bypassed.

Rate your accommodations → "Not open yet" (before November 29, 2026).

3.10 The reminder

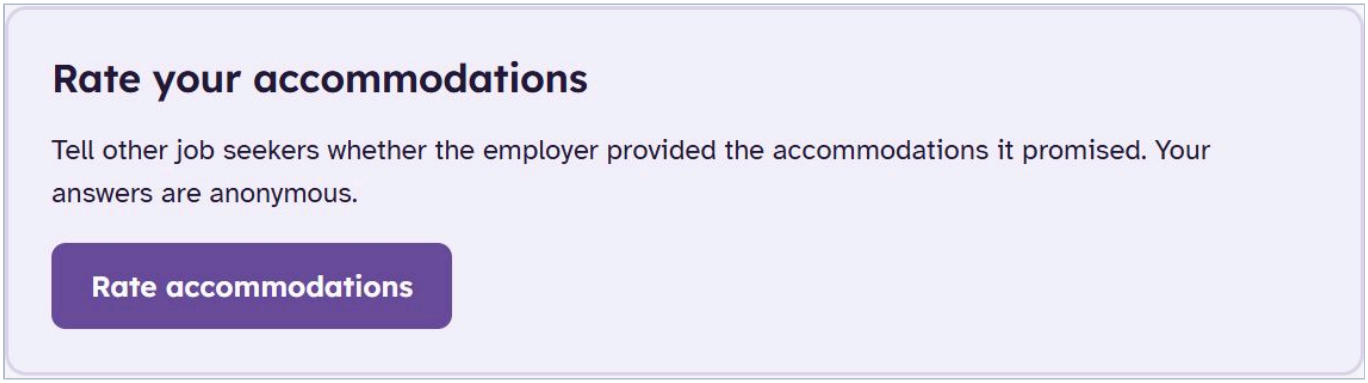

Job seeker (day 30+)

Story B. Juan's start date was September 8, 2026, so his form opened on October 8, 2026. The morning job sends him one notice.

Behind the screen: `php artisan feedback:remind` runs daily at 08:00 (in the capture it was run once by hand: "Sent 1 rating reminder(s).").

Notifications: "You can now rate the accommodations …".

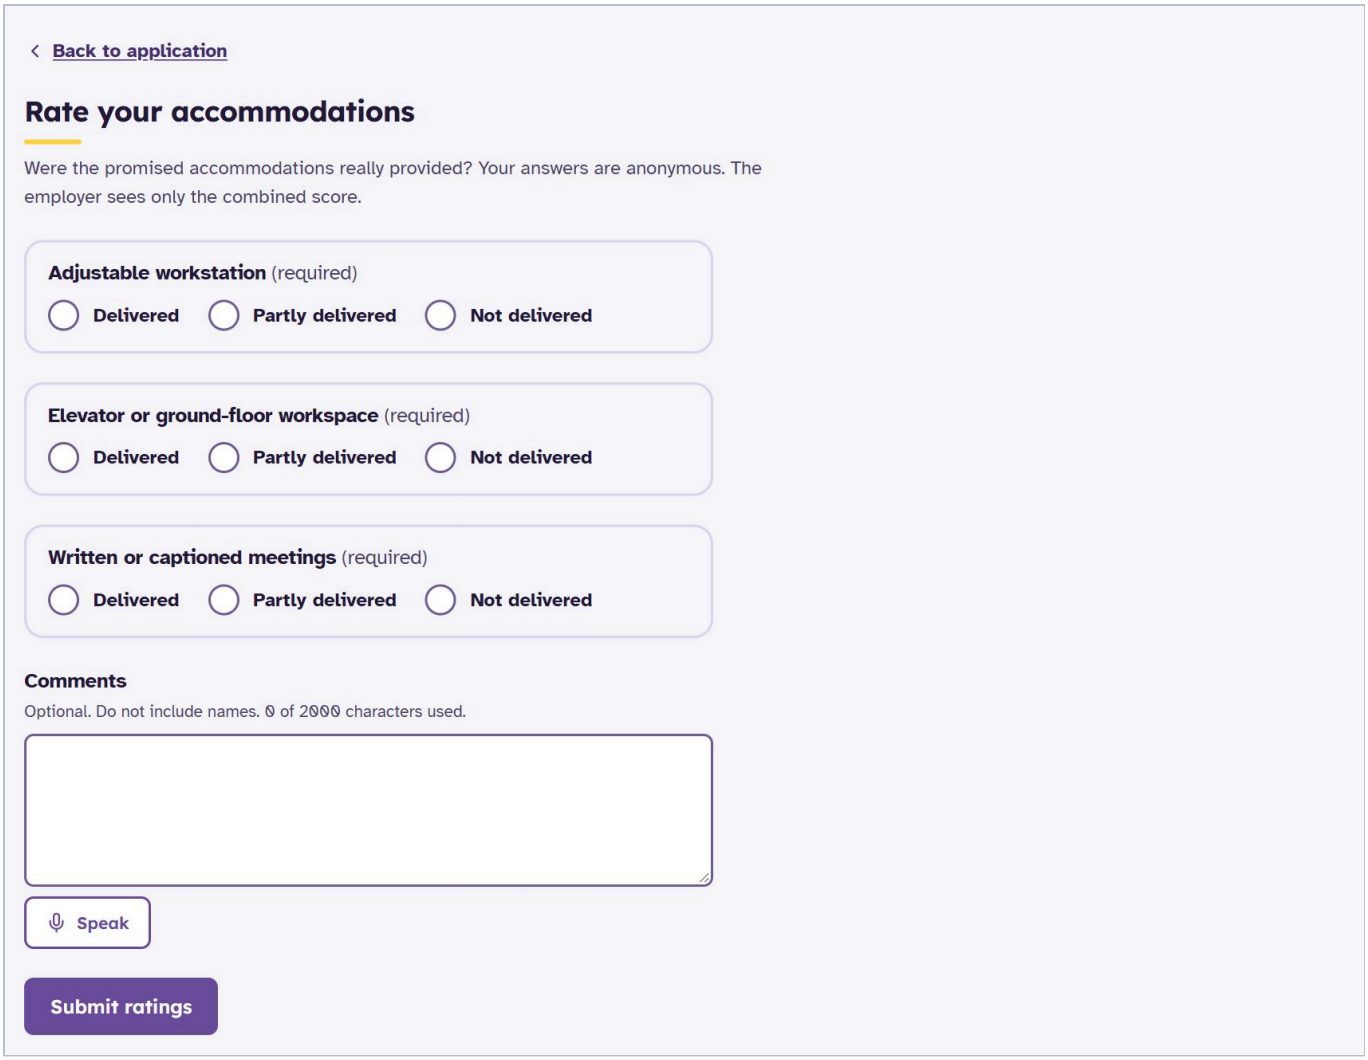

His application now shows "Rate accommodations".

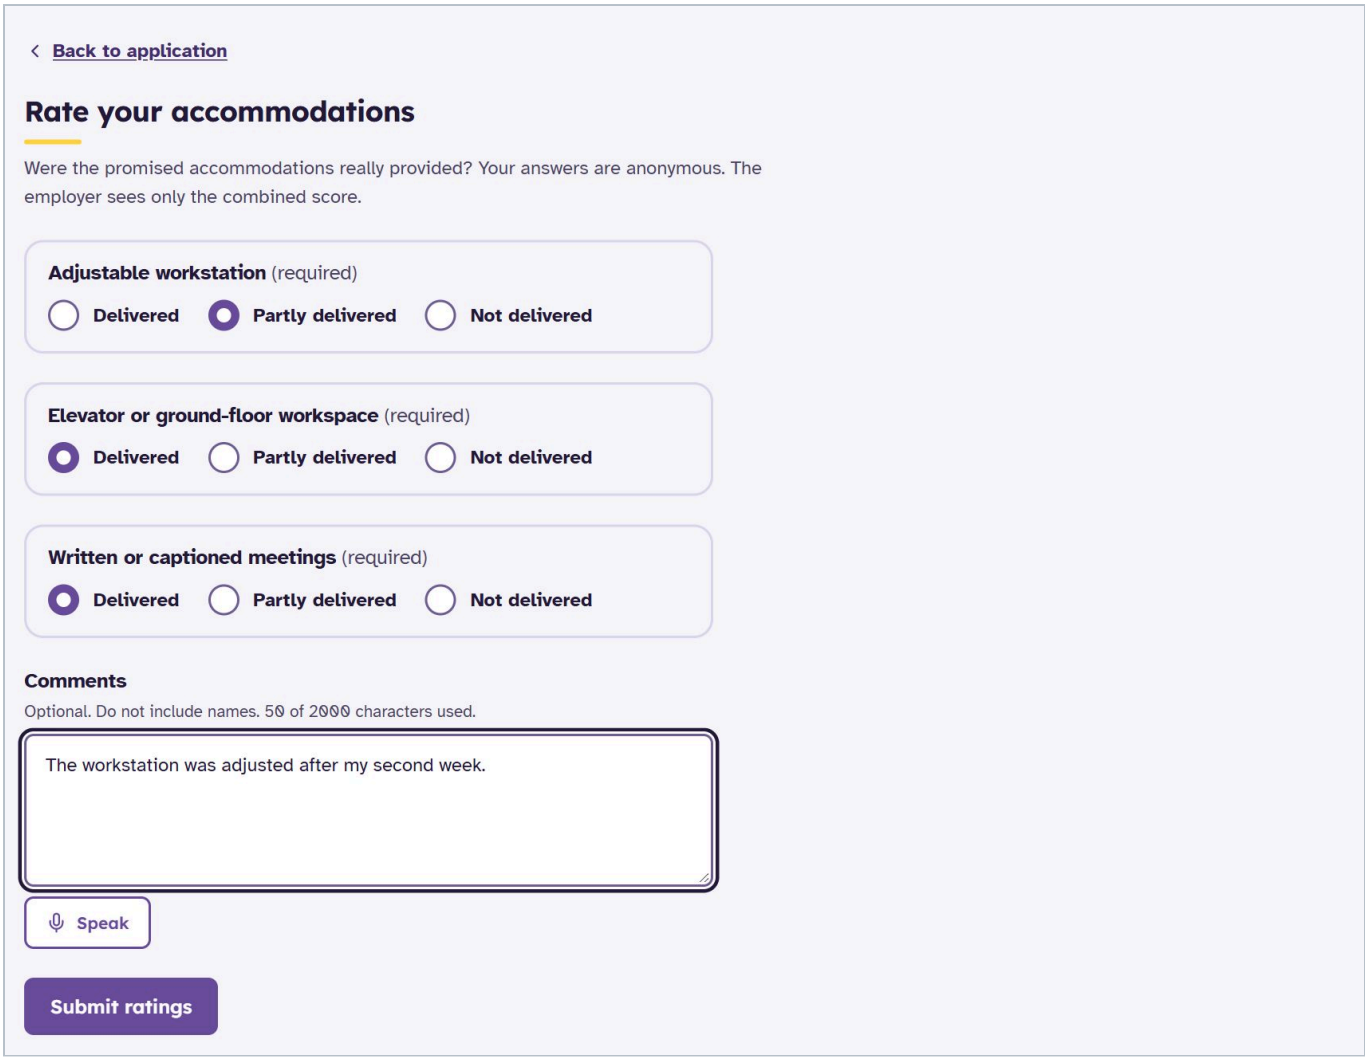

3.11 Rate each promised accommodation

Job seeker (day 30+)

One question per accommodation the posting listed when he was hired: Delivered, Partly delivered or Not delivered. Every item needs an answer; the comment is optional and should not name anyone.

The rating form.

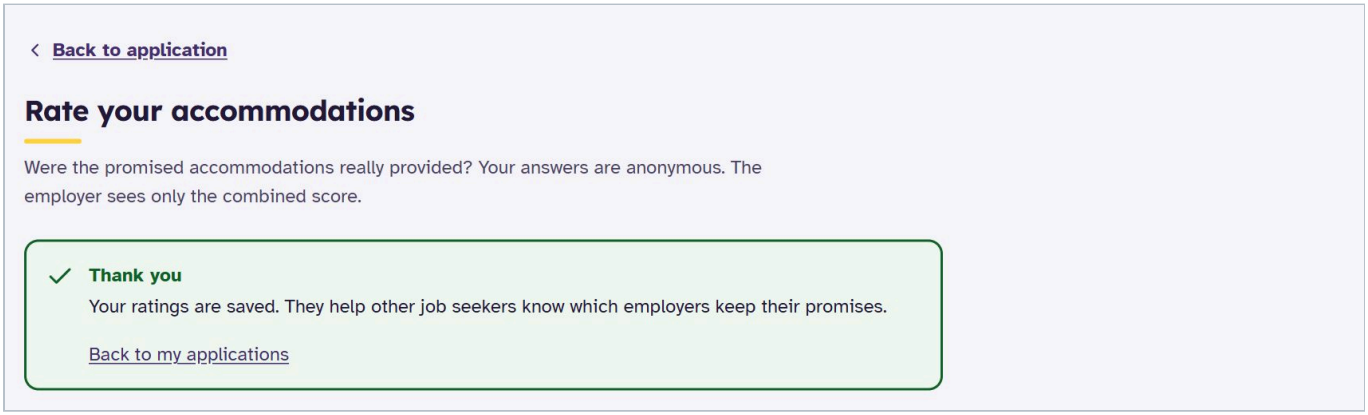

Juan's answers: Adjustable workstation – Partly delivered; Elevator or ground-floor workspace – Delivered; Written or captioned meetings – Delivered.

3.12 Submit

Job seeker (day 30+)

The ratings are saved. Juan's name is not attached to anything the employer can see.

Behind the screen: the ratings and the comment are stored in one transaction; an observer recalculates the employer's score right after.

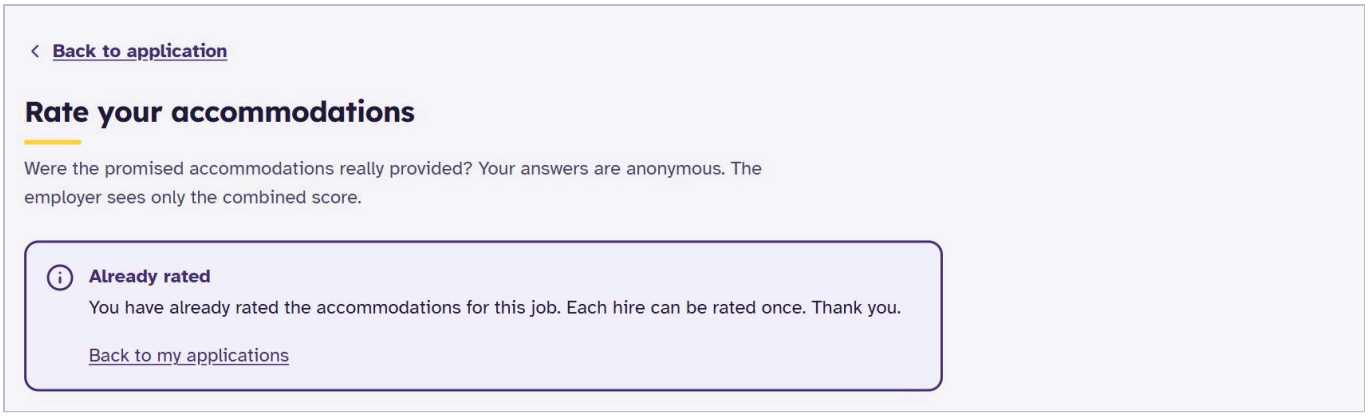

Thank you – ratings saved.

3.13 Only once per hire

Job seeker

Opening the form again shows "Already rated". A second rating is refused by the server (409 FEEDBACK_EXISTS).

Already rated.

4 Employer: reporting the hire and the score

The employer cannot rate itself and cannot see individual answers. Its part is to report (or confirm) the hire honestly and keep its promises.

4.1 Open the application

Employer

Opening an application marks it *Under review*. The Hiring confirmation card offers “Report hiring”.

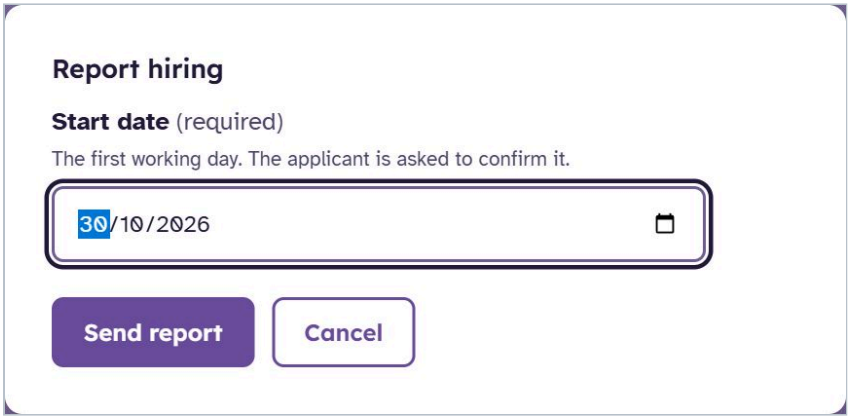

Hiring confirmation on the employer’s application page.

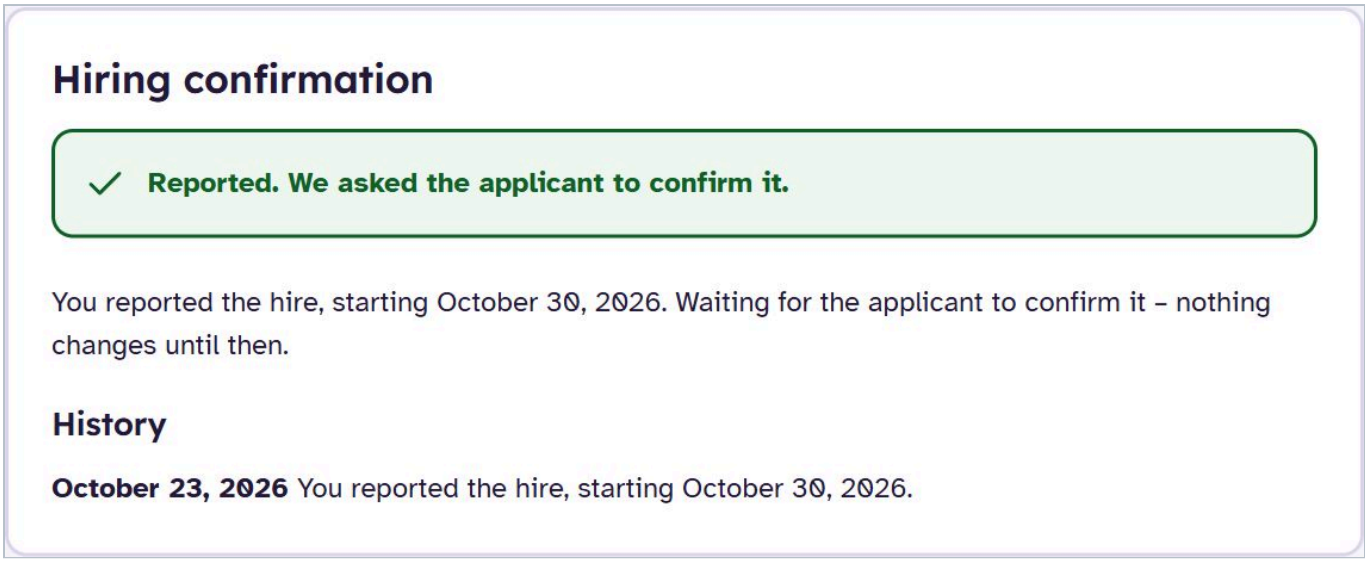

4.2 Report hiring with the start date

Employer

The employer enters the first working day – here October 30, 2026. The job seeker is asked to confirm it. (A job seeker can also report the hire first; then the employer confirms.)

Report hiring: the start date.

Reported – waiting for the applicant. Nothing changes until then.

4.3 The hire is confirmed

Employer

After Maria confirms, the employer's page shows "Hired — confirmed" with the start date and the full history. The employer's dashboard counts it as a confirmed hire.

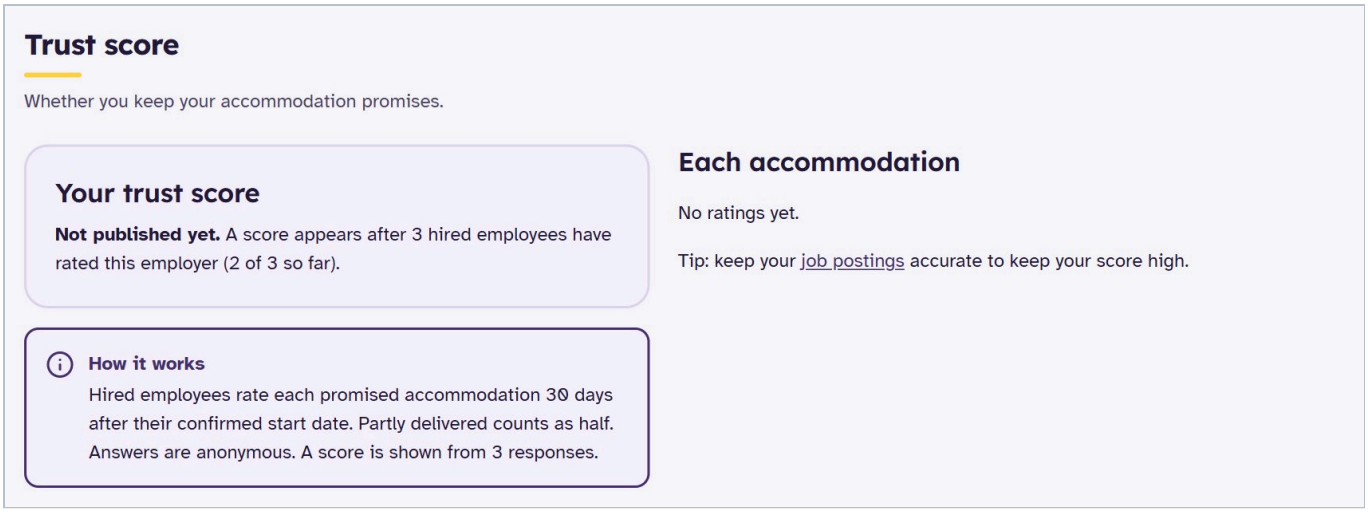

The employer's view after confirmation.

4.4 Below 3 responses: not published

Employer

Kalinga Foods Inc. has 2 responses. The score and the per-accommodation table stay hidden – for job seekers and for the employer itself.

Behind the screen: `GET /employers/2/trust-score → {"published":false,"score":null,"based_on":2,"breakdown":[]}`

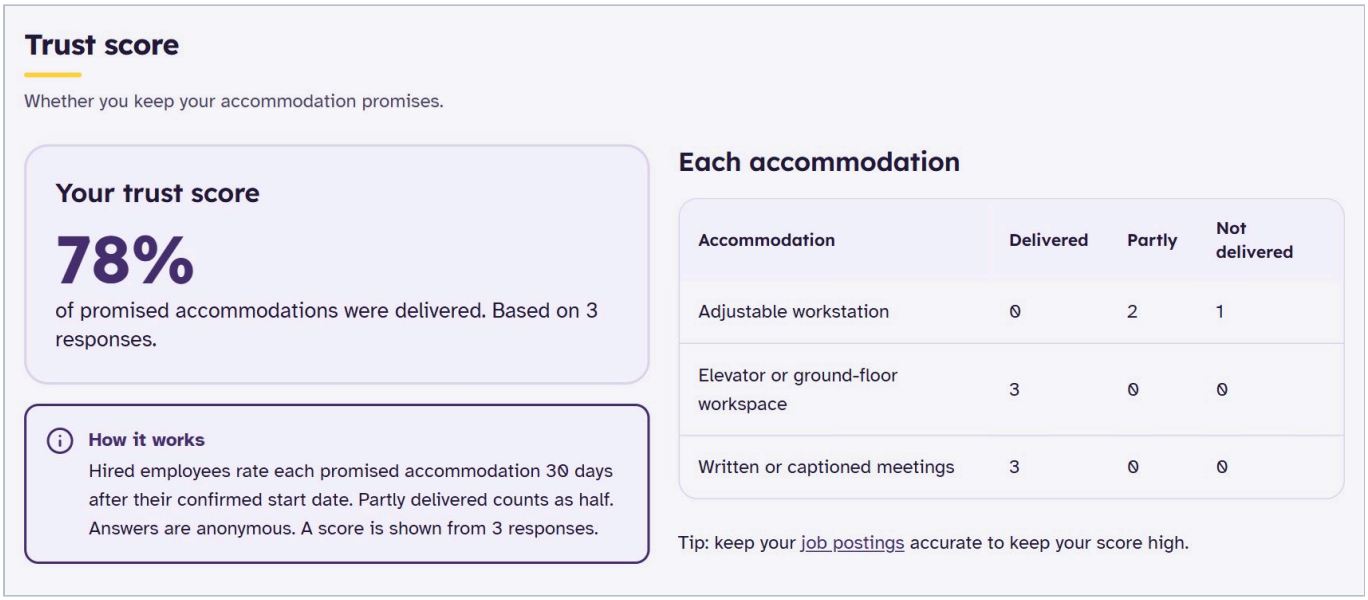

Trust score: “Not published yet … (2 of 3 so far)”.

4.5 The 3rd response publishes the score

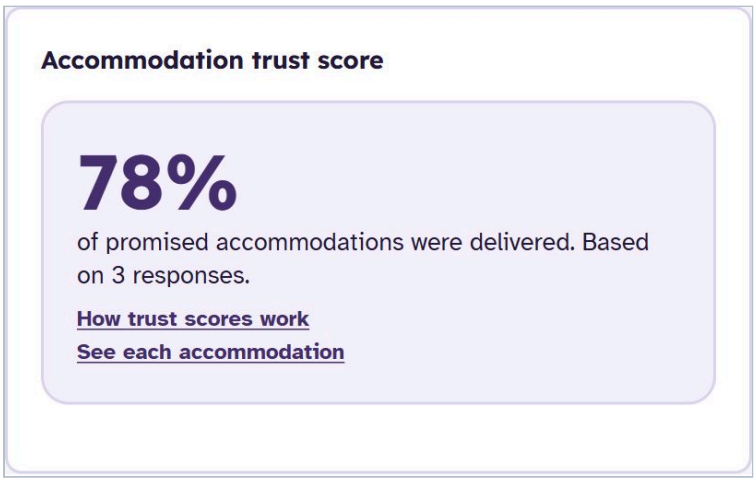

Employer

Right after Juan’s rating the employer sees **78%**, based on 3 responses, and counts per accommodation – which promise was kept and which was not. No names, no single answers.

Behind the screen: the same endpoint now returns `published: true, score: 78, based_on: 3` with the breakdown (section 6).

Trust score page after the 3rd response.

The same score on the employer dashboard.

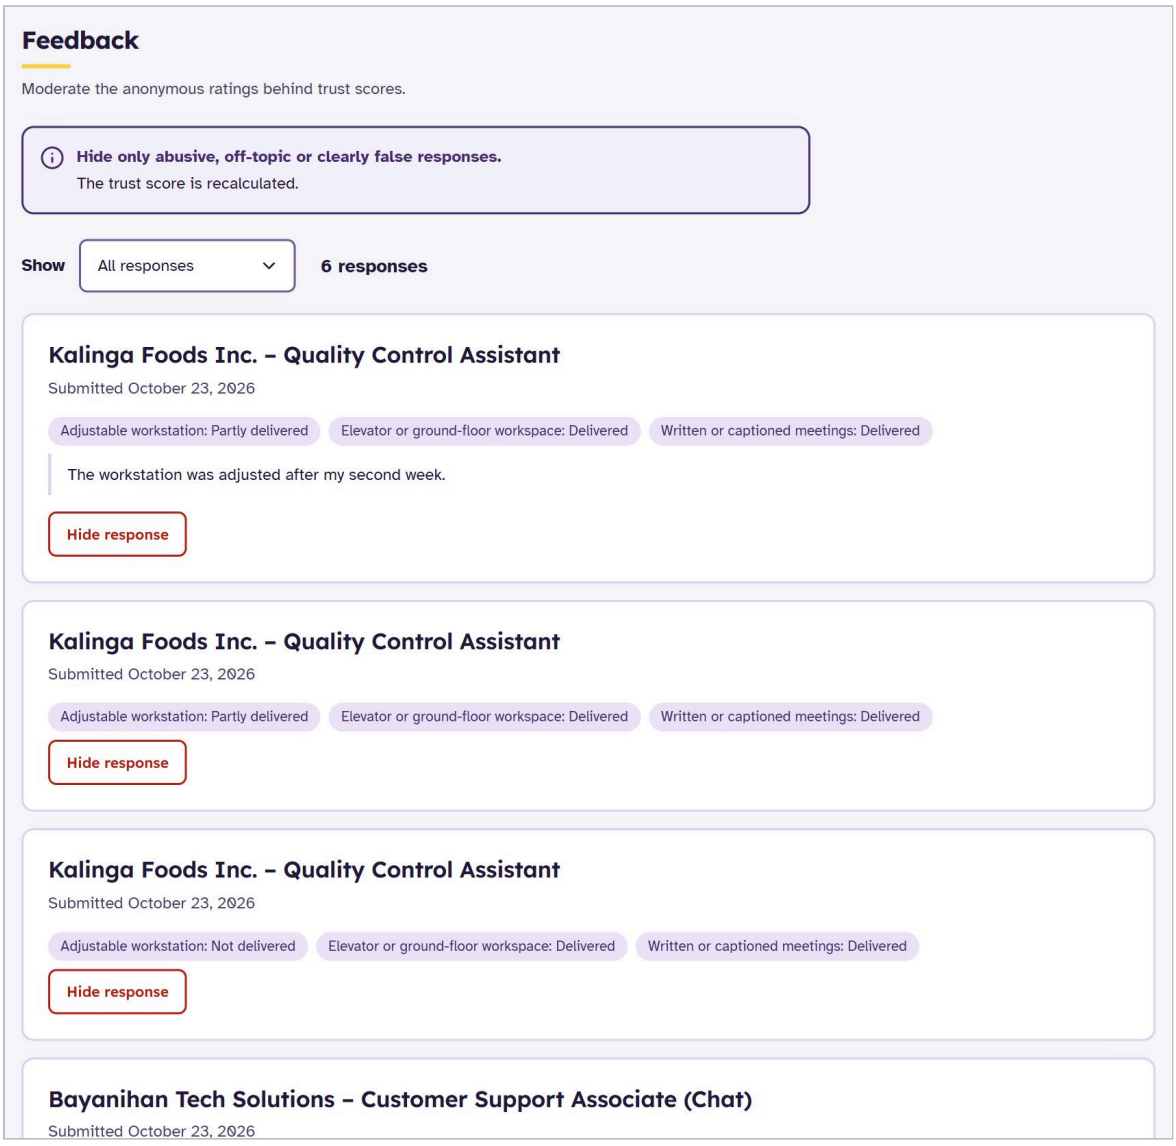

5 Administrator: moderating responses

5.1 Review and hide responses if needed

Administrator

Admins see every response with its ratings and comment, so they can hide abusive, off-topic or clearly false ones. Hiding (or showing again) recalculates the score at once; if fewer than 3 visible responses remain, the score is unpublished again.

Behind the screen: `PATCH /admin/feedback/{id}/hide` with `{"hidden": true|false}`. Admins cannot write or change ratings.

Admin → Feedback: Juan's new response on top.

6 How the score is calculated

Every rated item counts the same, across all of the employer's visible responses:

```
trust score = round( (Delivered × 1 + Partly × ½ + Not delivered × 0) ÷ items rated × 100 )
```

Worked example: Kalinga Foods Inc. after the 3rd response

Accommodation	Delivered (1 point)	Partly (½ point)	Not delivered (0)	Rated	Points
Adjustable workstation	0	2	1	3	1
Elevator or ground-floor workspace	3	0	0	3	3
Written or captioned meetings	3	0	0	3	3
All responses				**9**	**7**

7 points ÷ 9 rated items = 0.7778 → × 100 = 77.78 → rounded: **78%** – the same as the system shows (step 4.5).

- The score is a whole percentage (0–100), rounded half up (77.5 → 78).
- With 2 responses the same employer had no score at all – the threshold of 3 protects against one unlucky or unfair answer and makes it harder to guess who answered.
- The counts per accommodation show employers exactly which promise to fix; here: the adjustable workstation.
- Responses stay counted if the job posting is later deleted; hidden responses do not count.

7 Questions and special cases

Can an employer rate itself or push its score up?	No. Only the hired job seeker can rate, only after both sides confirmed the hire, once per hire, and only from day 30.
What if the employer claims a hire that did not happen?	The job seeker answers “Incorrect”. Without both confirmations there is no hire and no rating.
What if the start date moves?	Answer “Not yet” with the new date. The 30 days count from the date that is finally confirmed.
The employee left before day 30.	The hire stays confirmed; the rating still opens on day 30 and they can tell whether the promises were kept while they worked there.
The employer edits the posting after the hire.	The form uses the accommodations saved when the hire was confirmed, so promises cannot be removed afterwards.
The posting promised no accommodations.	Nothing to rate – the form says so – and the hire does not affect the score.
Can the employer find out who rated?	No. It sees only the combined score and counts per accommodation, published from 3 responses. Comments are seen by admins only.
Is there a deadline to rate?	No. The form stays open after day 30 until the job seeker rates.
Why did this guide not wait 30 days?	Story B uses a hire from the demo data whose start date was September 8, 2026; its window was really open on the capture day. No dates were changed.

8 For developers: endpoints and rules

Step	Call (through the gateway, `/api`)	Rule / error
Report hire	`POST /applications/{id}/hiring-reports {start_date}`	Application date ≤ start date ≤ today + 365; one open report (409 HIRING_REPORT_PENDING)
Answer	`POST /applications/{id}/hiring-reports/{report}/response {answer: confirm|not_yet|incorrect, start_date?}`	Only the other party (reporter → 403); closed report → 409 HIRING_REPORT_CLOSED
Form	`GET /applications/{id}/feedback-form`	`is_open`, `opens_on`, `submitted`, items saved at the hire
Rate	`POST /applications/{id}/feedback {items: [{accommodation_id, rating}], comments?}`	Hired + day ≥ 30 (422 FEEDBACK_NOT_OPEN); once (409 FEEDBACK_EXISTS); every item rated
Score	`GET /employers/{id}/trust-score`	Same answer for everyone; `published` from 3 visible responses
Moderate	`PATCH /admin/feedback/{id}/hide {hidden}`	Admins only; recalculates
Reminder	`php artisan feedback:remind` (scheduler, daily 08:00 Manila)	Once per hire, when the form is open; in-app notice + email if switched on

- `feedback_opens_on` = `hire_start_date` + 30 days, Asia/Manila (`Application::feedbackOpensOn()`).
- Score recalculation: `FeedbackObserver` after each save, hide or unhide → `employers.trust_score`, `feedback_count`.
- Rebuild this guide: reseed the test database, run Core on it, then in `tests/a11y`: `DEMO_PASSWORD=… npm run trust-guide`.
